

**Blastco**®  
a TF Warren Company

**Field applicators of protective coatings and linings**

The oil and gas industry mainly comprises crude oil, natural gas, natural gas liquids, oil refineries, petrochemical plants, distributors of petroleum products, retail outlets, gasoline, diesel, lubricants, and more. According to Statista, the United States produced 669 million metric tons of oil and is the world's largest oil-consuming nation as well as the world's largest natural gas consuming nation.

The most carefully considered decision made when buying or repairing a steel storage tank should be the one that determines the quality of its coating. Preserving and maintaining surfaces on steel storage tanks are crucial for increasing structural longevity and safeguarding the investment. For years, Blastco has gained credibility as a premier field abrasive blaster and applicator of protective coatings for new and maintenance projects in the oil and gas industry.
